

Pro Vice-Chancellor Education / EI&A

Student Satisfaction Report

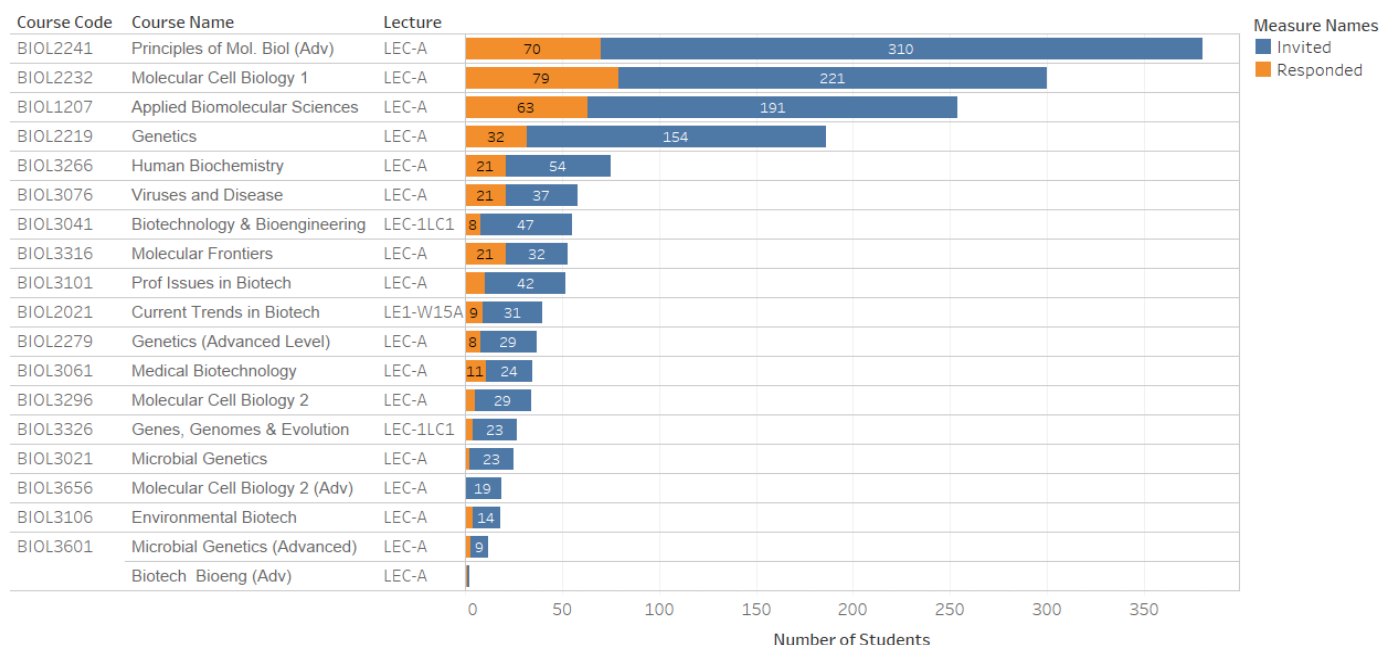

Faculty of Science

Outline: This report aims to provide a summary of students' educational experience satisfaction per school/course/lecture. How course/lecture sizes influence student satisfaction ratings will also be examined.

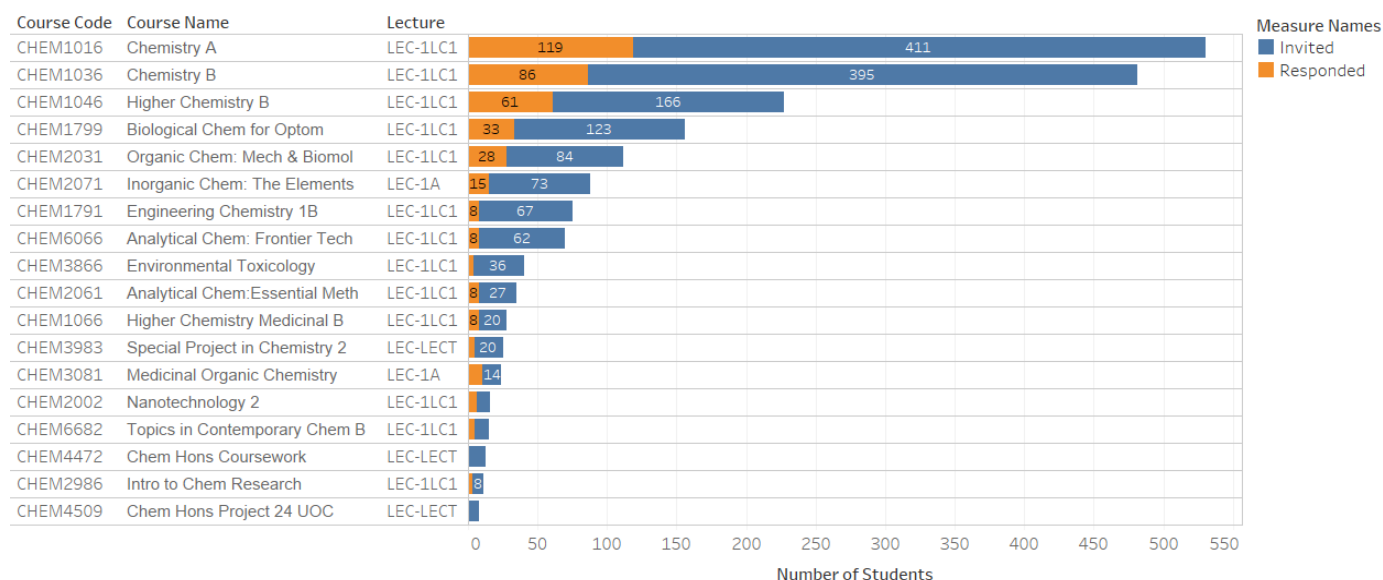

Results: The proportion of students that were invited vs. responded to the survey per school/course/lecture is shown below in Table 1. When comparing between schools, Mathematics had the highest response rate (29.70%) with Biology second (28.84%), Chemistry third (26.47%) and Physics fourth (25.89%).

Table 1. Proportion of Students that were Invited vs. Responded to the Survey

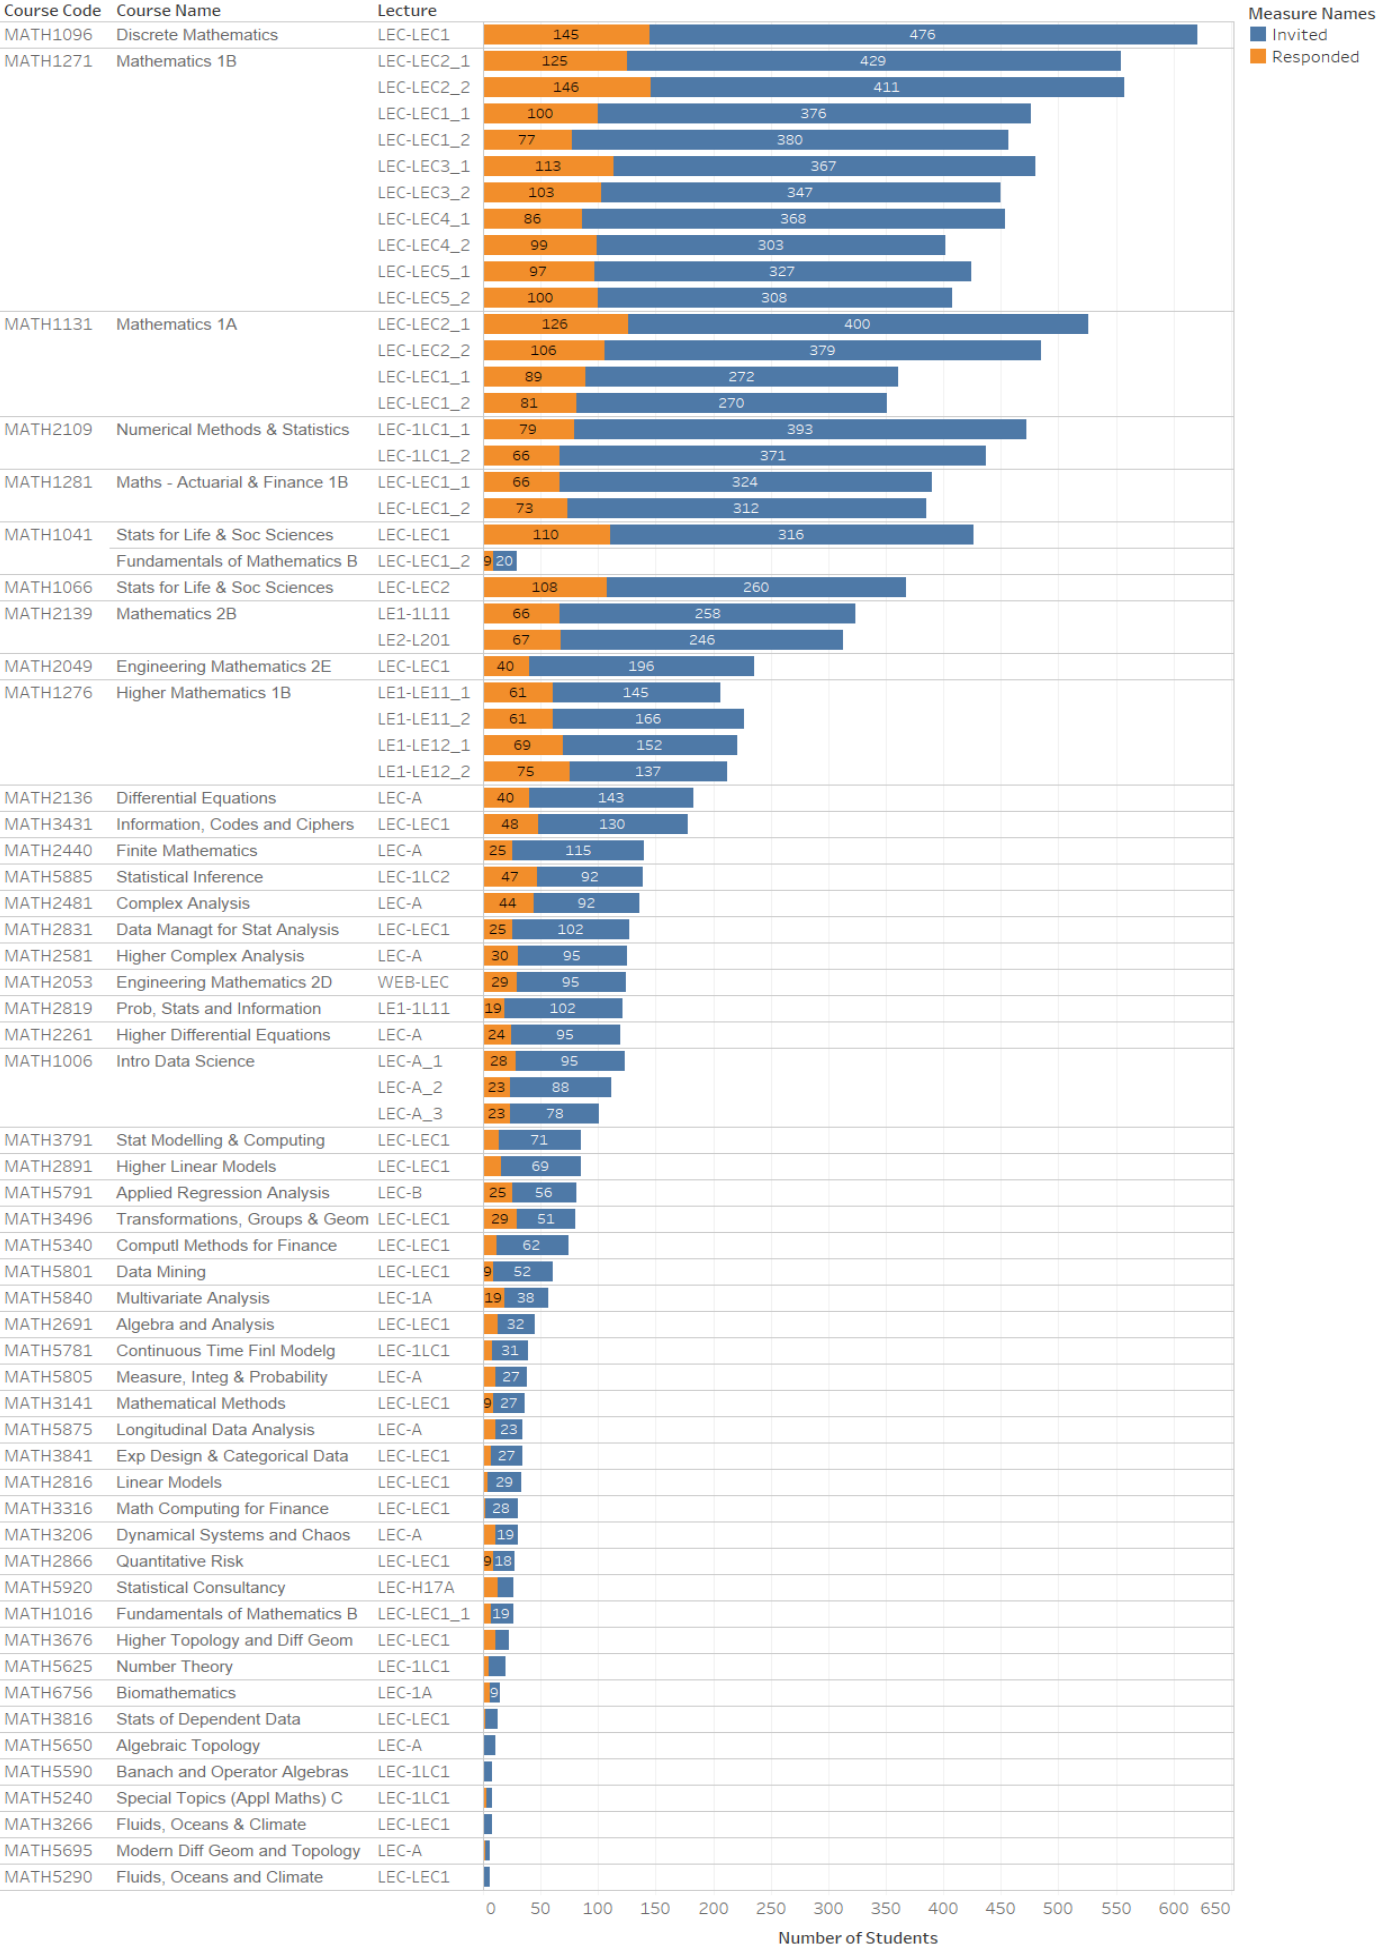

BIOLOGY

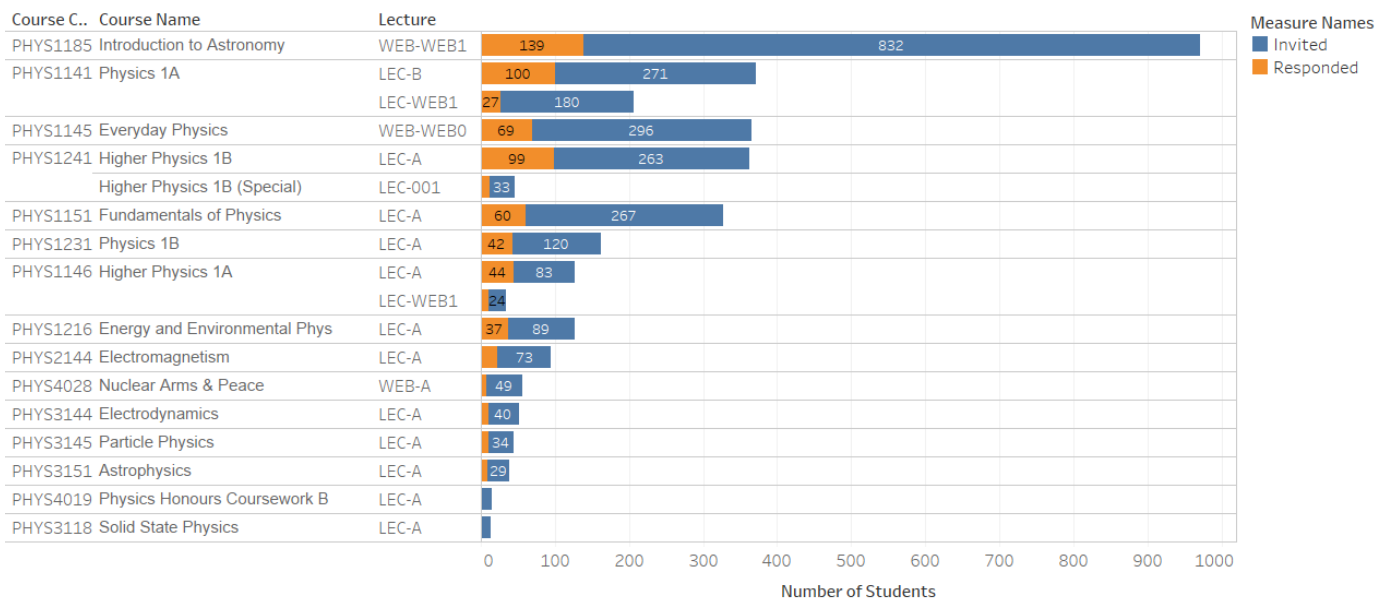

CHEMISTRY

MATHEMATICS

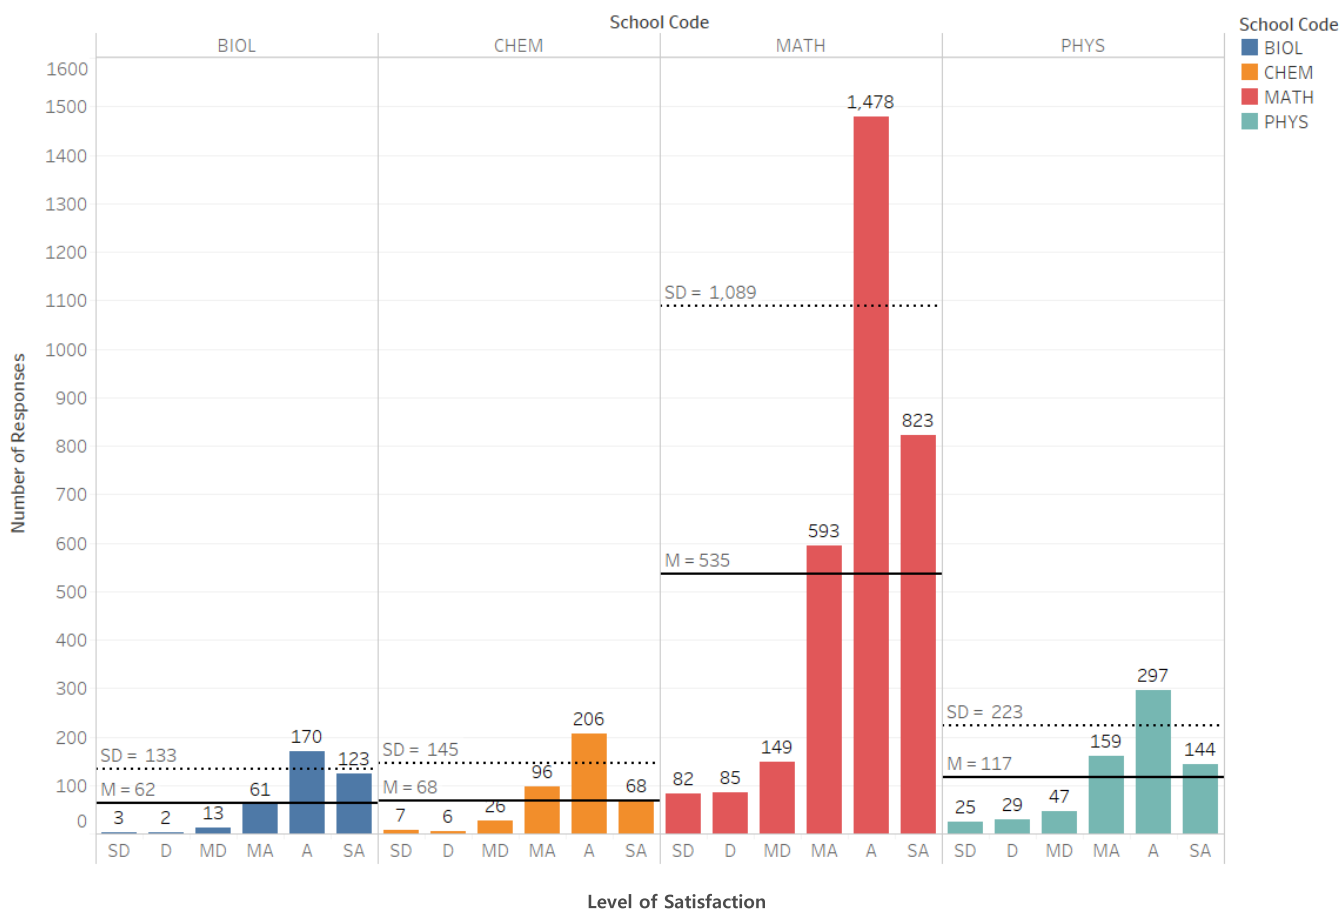

PHYSICS

The distribution of students' satisfaction responses is shown in Figure 1. below. The majority of the satisfaction responses were concentrated between moderately agree (MA) and strongly agree (A) indicating a large majority of the students were moderately to strongly satisfied with the courses/lectures they were taking.

Figure 1. Distribution of the Student Satisfaction Responses

Student Satisfaction Distribution

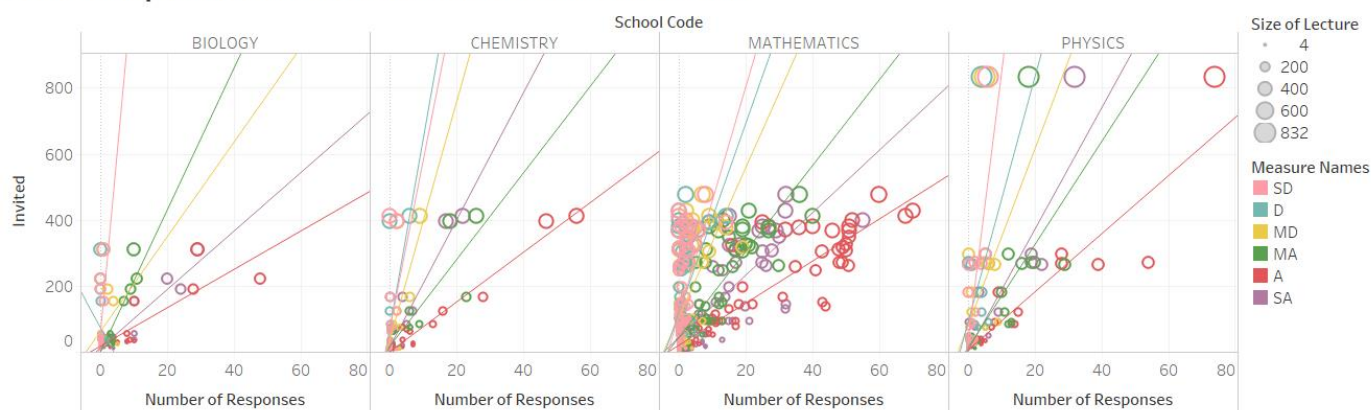

Note: SD = Strongly Disagree, D = Disagree, MD = Moderately Disagree, MA = Moderately Agree, A = Agree, SA = Strongly Agree.

The relationship between lecture sizes and student satisfaction ratings (i.e., SD, D, MD, etc.) is described in Figure 2. below. The different regression lines indicate that some ratings are more predictive of lecture sizes than others. More specifically, higher satisfaction ratings show a more linear trend indicating that they are better at predicting

the size of the lectures than lower satisfaction ratings. Overall, the results indicate that the higher satisfaction ratings are more strongly associated with lecture size than lower satisfaction ratings across all schools.

Figure 2. The Relationship between Lecture Size and Student Satisfaction per School

Relationship between Lecture Size and Student Satisfaction

Note: SD = Strongly Disagree, D = Disagree, MD = Moderately Disagree, MA = Moderately Agree, A = Agree, SA = Strongly Agree.

The descriptive statistics for student satisfaction per school/course/lecture are shown in Table 2. below. Mean satisfaction scores can be considered reliable when the sample size (N) is equal to or above 30 and the standard deviation (SD) is low. Even when taking this rule of thumb into account, the mean scores indicates that students are generally satisfied with the course with very few courses reliably showing lower levels of satisfaction (M<4, Min = 1, Max = 6). Due to the lower levels of satisfaction scores, more investigation is recommended for the following courses/lectures: MATH2109_LEC-L1C1_1, PHYS1216_LEC-A.

Table 2. Descriptive Statistics per School/Course/Lecture

Note: The student satisfaction ratings ranges from 1 to 6. (1 = Strongly Disagree (SD), 6 = Strongly Agree (SA). SD = Standard deviation, Min = Minimum rating score, Max = Maximum rating score, N = Sample Size.

Conclusion: The results from the descriptive statistics and the distribution of the student satisfaction responses generally show that students are satisfied with the lectures/courses they are taking with an exception to the few courses highlighted above. There also seems to be a trend where larger size of lectures is more strongly associated with higher satisfaction ratings across all schools. To get a better understanding of student satisfaction ratings in the faculty of science, it is recommended that comparisons are made across other faculties in the future.
